- Using the inverse operation
- Completing multi-step problems
- Multiplication
- Factors
- Division

### To protect our world, what do we need to change?

Humans form part of the living world and our decisions and actions can have a significant impact on the diversity of life. Understanding the factors which affect the health and success of different creatures allows us to make informed decisions about how we affect the natural world, because as ethically informed citizens, we need to consider the impact of our actions, both locally and in the wider world.

- We will learn about what we, and animals, need to survive
- We will learn about food chains and about how living things complete to survive
- We will learn about how creatures have adapted to fit into their environment
- We will learn about how we create energy
- We will create, plan and evaluate a fair test
- We will think about how we can protect our world
