Parents: When children start to learn about 2-digit numbers, it is important that they understand the value of each digit – in other words, in the number 24, the '2' is worth '20', not just '2'. Your child will have been learning in class that one object can mean more than 1. Encourage your child to count the 10p coins above in tens – 10, 20, 30 and so on, and then to count on in ones for the 1p coins. If your child needs a more hands on approach, use real coins and let them move them around to count them.
